

FUNDING FOR WATERSHED IMPROVEMENT PROJECTS

While the WIC recommends that a sustainable local funding source be developed to provide continued investments in watershed health, grant makers have been identified as possible sources to fund projects within the overall watershed improvement strategy (**Appendix F**). Pursuing grants to fund the watershed improvement strategy is not secure due to the funding cycles and associated pitfalls. However, federal, state, and private foundation grants represent existing funding opportunities that must be considered until more secure local measures can be enacted.
